Summary

I'm a senior software engineer with deep experience designing and operating distributed systems. I'm passionate about enabling confident business decisions through experimentation and data-driven analysis, and have a proven track record building high-throughput, observable systems as an individual contributor, architect, and team lead.

Languages & Technologies

Languages: Python, C#, SQL, JavaScript, TypeScript, HTML, CSS, shell scripting
Technologies: AWS, Azure, Postgres, Linux, Windows, FastAPI, ASP.NET, Angular, React

Experience

- 2025 – Now **Sr. DevOps Engineer IDR-TA, Index Analytics**, Windsor Mill, MD, Remote.
- Designed and built features for an analytics platform providing AI-powered insights and workflow features to dispute analysts, using AWS Bedrock, Snowflake, Postgres, FastAPI, and Angular.
 - Proactively optimized AWS costs reducing monthly spend by 50%.
 - Instrumented services with observability and provided end-to-end production support.
 - Implemented CI/CD pipelines using GitHub Actions and AWS CDK which reduced contention deploying microservices and improved developer productivity.
 - Designed and implemented an NLP-based evaluation framework to measure LLM output quality, enabling rapid experimentation with models, prompts, and parameters for improved chatbot and AI insight results.
 - Led integration of ML (scikit-learn) into the dispute prescreening process, reducing time analysts spend on ineligible cases.
- 2023 – 2025 **Sr. Staff Engineer, Rosnet**, Parkville, MO, Remote.
- Improved observability across production services, adding metrics, logs, and distributed tracing to reduce mean time to resolution.
 - Improved CI/CD and containerization practices across teams, increasing deployment reliability and developer velocity.
 - Reviewed and simplified designs for multiple projects saving the company hundreds of dev hours.
 - Implemented framework for secure secrets management using Azure Key Vault.
 - Discovered and resolved multiple complex security vulnerabilities.
- 2021 – 2023 **Tech Lead, Rosnet**, Parkville, MO, Remote.
- Bootstrapped and led a team delivering real-time features backed by event-driven services using .NET, SignalR, React, RabbitMQ, & Elasticsearch.
 - Resolved one of the company's largest scalability bottlenecks by introducing async event queuing for expensive operations.
 - Implemented a production replay system for load testing heavyweight database workloads, validating service reliability under peak load.
 - Implemented analytics-driven forecasting for new menu items integrated with the legacy sales forecast system.

- 2012 – 2020 **Sr. Software Engineer, Rosnet, Parkville, MO.**
- o Designed and built Rosnet's data ingestion platform: a distributed system with clients on thousands of machines processing 3TB+ of data daily from 30 POS integrations, delivering near real-time data to reporting and analytics. Owned this system end-to-end; it has been the foundation of Rosnet's business for over a decade.
 - o Built and maintained Rosnet's public API (api.rosnet.com), defining API contracts and data schemas for downstream consumers.
 - o Implemented a labor rules engine with an innovative markdown-based test framework to ensure correctness of complex pay calculations.
 - o Setup CI/CD pipelines for multiple projects using Jenkins.
- 2006 – 2012 **Sr. Programmer Analyst, Cameron Insurance Companies, Cameron, MO.**
- o Technical lead on a multi-year mainframe policy system replacement project.
 - o Wrote a business object framework which is used to enforce complex underwriting rules.
 - o Created an ASP.NET web portal used by insurance agents to quote rates for insurance policies.
 - o Implemented a web service that provides real time rating services to third party comparative raters.
 - o Advocated for and helped team adopt automated testing and database version control.
- 2005 – 2006 **Programmer Analyst, Cameron Insurance Companies, Cameron, MO.**
- o Implemented policy declarations printing system using .NET framework. Completed this project in a fraction of the time expected by parsing legacy COBOL programs which contained the x and y coordinates of each form field.
 - o Implemented native app that enabled adjusters to upload images from low bandwidth internet connections.
- 2001 – 2005 **Sr. System Administrator, Shook, Hardy, & Bacon, Kansas City, MO.**
- o Developed an application that tracks hardware, software, and drive usage on 250 servers.
 - o Developed various applications and scripts to automate repetitive system administration tasks.

Freelance, Open Source, & Side Projects

- 2024 – Now **Side Project, Budget Flow, budgetflow.io.**
- o Created a web app for spending analysis and cash flow projections using Python, scikit-learn for forecasting, React (Refine), Supabase, & Cloudflare.
- 2009 – 2025 **Open Source, Schema Zen, github.com/sethreno/schemazen, 336 stars.**
- o Created a tool to dump and restore SQL Server schema to text files for version control. This tool is preferred by many over similar solutions from Microsoft and Redgate due to it's speed and simplicity.
 - o Includes regression tests that create, dump, & compare databases using the tool against SQL Server Docker images in GitHub Actions.
 - o Reviewed and merged contributions from developers from around the world with a wide range of skill levels.
 - o Maintained a code base for over a decade as the underlying .NET framework has evolved.

Education & Certifications

- 2001 – 2004 **Bachelor of Science in Computer Information Systems, DeVry University, Kansas City, MO.**
- 2025 **AWS Certified Cloud Practitioner.**
