Summary

Senior software engineer with deep experience designing and operating distributed data pipelines and real-time analytics systems. I am obsessed with measuring results — from LLM output quality to service reliability — and have a proven track record building high-throughput, observable backend services end-to-end as individual contributor, architect, and team lead.

Languages & Frameworks

Languages: C#, Python, SQL, JavaScript, TypeScript, HTML, CSS, shell scripting

Frameworks: .NET, ASP.NET, React, Django

Experience

2025 – Now **Sr. DevOps Engineer IDR-TA**, *Index Analytics*, Windsor Mill, MD, Remote.

- Designed and built features for an analytics platform providing AI-powered insights to dispute analysts, using a microservices architecture with AWS Bedrock, Python, Java Spring Boot, and Postgres. Instrumented services with observability tooling (metrics, logs, traces) and provided end-to-end production support.
- Proactively optimized AWS costs reducing monthly spend by 50%.
- Implemented CI/CD pipelines using GitHub Actions and AWS CDK which reduced contention deploying microservices and improved developer productivity.
- Designed and implemented an NLP-based test suite to measure LLM output quality for the chatbot and AI insight pipeline, enabling faster iteration and parameter tuning for improved results.
- Led integration of ML (scikit-learn) into the dispute prescreening process, reducing time analysts spend on ineligible cases.

2023 – 2025 **Sr. Staff Engineer**, *Rosnet*, Parkville, MO, Remote.

- Improved observability across production services, adding metrics, logs, and distributed tracing to reduce mean time to resolution.
- Improved CI/CD and containerization practices across teams, increasing deployment reliability and developer velocity.
- Reviewed and simplified designs for multiple projects saving the company hundreds of dev hours.
- Implemented framework for secure secrets management using Azure Key Vault.
- Discovered and resolved multiple complex security vulnerabilities.

2021 – 2023 **Tech Lead**, *Rosnet*, Parkville, MO, Remote.

- Bootstrapped and led a team delivering real-time features backed by event-driven services using .NET, SignalR, React, RabbitMQ, & Elasticsearch.
- Resolved one of the company's largest scalability bottlenecks by introducing async event queuing for expensive operations.
- Implemented a production replay system for load testing heavyweight database workloads, validating service reliability under peak load.
- Implemented analytics-driven forecasting for new menu items integrated with the legacy sales forecast system.

- 2012 – 2020 **Sr. Software Engineer**, *Rosnet*, Parkville, MO.
- o Designed and built Rosnet's data ingestion platform: a distributed system with clients on thousands of machines processing 3TB+ of data daily from 30 POS integrations, delivering near real-time data to reporting and analytics. Owned this system end-to-end; it has been the foundation of Rosnet's business for over a decade.
 - o Built and maintained Rosnet's public API (api.rosnet.com), defining API contracts and data schemas for downstream consumers.
 - o Implemented a labor rules engine with an innovative markdown-based test framework to ensure correctness of complex pay calculations.
 - o Setup CI/CD pipelines for multiple projects using Jenkins.
- 2006 – 2012 **Sr. Programmer Analyst**, *Cameron Insurance Companies*, Cameron, MO.
- o Technical lead on a multi-year mainframe policy system replacement project.
 - o Wrote a business object framework which is used to enforce complex underwriting rules.
 - o Created an ASP.NET web portal used by insurance agents to quote rates for insurance policies.
 - o Implemented a web service that uses industry standard XML to provide real time rating services to third party comparative raters.
 - o Advocated for and helped team adopt automated testing and database version control.
- 2001 – 2006 **Sr. System Administrator & Programmer Analyst**, *Shook, Hardy & Bacon / Cameron Insurance*, Kansas City, MO.
- o Built automation tools, a hardware tracking app, a .NET policy printing system (leveraging legacy COBOL parsing), and a low-bandwidth image upload app for insurance adjusters.

Freelance, Open Source, & Side Projects

- 2024 – Now **Side Project**, *Budget Flow*, budgetflow.io.
- o Created a web app for spending analysis and cash flow projections using Python, scikit-learn for forecasting, React (Refine), Supabase, & Cloudflare.
- 2009 – 2025 **Open Source**, *Schema Zen*, github.com/sethreno/schemazen, 336 stars.
- o Created a tool to dump and restore SQL Server schema to text files for version control. This tool is preferred by many over similar solutions from Microsoft and Redgate due to its speed and simplicity.
 - o Includes regression tests that create, dump, & compare databases using the tool against SQL Server Docker images in GitHub Actions.
 - o Reviewed and merged contributions from developers from around the world with a wide range of skill levels.
 - o Maintained a code base for over a decade as the underlying .NET framework has evolved.

Education & Certifications

- 2001 – 2004 **Bachelor of Science in Computer Information Systems**, *DeVry University*, Kansas City, MO.
- 2025 **AWS Certified Cloud Practitioner**.
